Senior Backend Engineer — Distributed Systems Specialist

Email : jvegar@uni.pe

Mobile : +51-991139451

Lima, Perú

Senior Backend Engineer specializing in **Distributed Systems** and **Event-Driven Architecture**. Expertise in migrating legacy monoliths to **Microservices** using **CQRS** and **Event Sourcing**. Proven track record of designing high-scale systems with **NestJS**, **Kafka**, and **PostgreSQL**.

EXPERIENCE

• BairesDev

Software Engineer

Remote

Sept 2021 – Present

◦ Fintech: Lucinity (Anti-Money Laundering Platform)

- * Engineered a high-performance event-store using **PostgreSQL NOTIFY** to maintain real-time projections for complex financial transaction monitoring and approval workflows.
- * Architected and developed scalable **GraphQL** services via Apollo Server, successfully migrating legacy Python (FastAPI) REST endpoints to improve frontend developer velocity.
- * Implemented **Event Sourcing** patterns to ensure a high-integrity audit trail for case management.
- * Managed database schema evolution by executing complex **Flyway** migrations for high-availability PostgreSQL clusters.

◦ EdTech: Instructure (Migration & Infrastructure)

- * Led the backend migration of a mission-critical legacy app from **Node.js v5** to a modern, containerized **AWS Fargate** environment.
- * Refactored legacy JavaScript into modern ES6+ standards, implementing **Async/Await** and **Promises** to resolve race conditions and improve performance.
- * Modernized DevOps workflows with optimized **Docker** configurations, integrating AWS S3, Redis, Elasticsearch, and MariaDB.

◦ Logistics: Haul (Distributed Transportation)

- * Orchestrated a **monolith-to-microservices migration**, decoupling core logistics into dedicated Command and Query services using **NestJS**.
- * Implemented **CQRS** and **Event Sourcing** using a custom internal library with **MongoDB** as the primary event store.
- * Integrated **Kafka** to manage asynchronous service communication and ensure eventual consistency across the logistics platform.

• NTT Data

Centers Lead Developer

Lima, Perú

Sept 2020 – Aug 2021

◦ Enterprise Infrastructure: Acciona & REE

- * Developed serverless integrations with **Azure Functions** for third-party SMS API orchestration and multi-factor user verification for stock-share registration.
- * Designed the migration strategy for transitioning legacy on-premise components to **SharePoint Online**, ensuring zero downtime for mission-critical services.
- * Mentored and led a development team, establishing best practices for modernizing enterprise SharePoint development via **SPFx** and **React**.

• Certero

Solutions Architect & Project Coordinator

Lima, Perú

Feb 2017 – Mar 2020

- **Architected and led** complex digital transformation and infrastructure migration projects for enterprise clients including **Nestlé** and **Universidad del Pacífico**.
- **Orchestrated Cloud Migrations** of legacy .NET applications to **Azure**, refactoring on-premise components into cloud-native services (Azure SQL, Web Apps, Functions).
- Performed **deep-stack troubleshooting** across networking, application logic, and database performance layers to resolve systemic bottlenecks.

TECHNICAL SKILLS

- **Architecture & Backend:** Distributed Systems, Microservices, CQRS, Event Sourcing, DDD, NestJS, Node.js, GraphQL (Apollo), Python, C#
- **Data & Messaging:** Kafka, PostgreSQL (Flyway), MongoDB, Redis, ElasticSearch, MariaDB
- **Cloud & Infrastructure:** AWS (Fargate, S3, ECS), Azure (Functions, Web Apps), Docker, Kubernetes, Terraform
- **Engineering Productivity:** Arch Linux, NeoVim (Custom LSP/Treesitter), Tmux, Git, Shell Scripting (Zsh/Bash)
- **Languages:** Spanish (Native), English (C1 Advanced)

EDUCATION

- **University of the Pacific** Lima, Perú
Master in Finance – Investment Portfolio Management
- **National University of Engineering** Lima, Perú
Bachelor in Systems Engineering
